### **British Columbia Web Filing**

Web Filing is the BC's updated electronic system for streamlined land title submissions by lawyers, notaries, and land surveyors. The new design reflects policy, technology, and customer feedback, aiming to increase efficiency, accuracy, and security.

### This Case Study

Web Filing was built in multiple phases. In this presentation, I'll focus on one of these phases that involved building the **digital forms** and the **file management experience.** 

### The Project

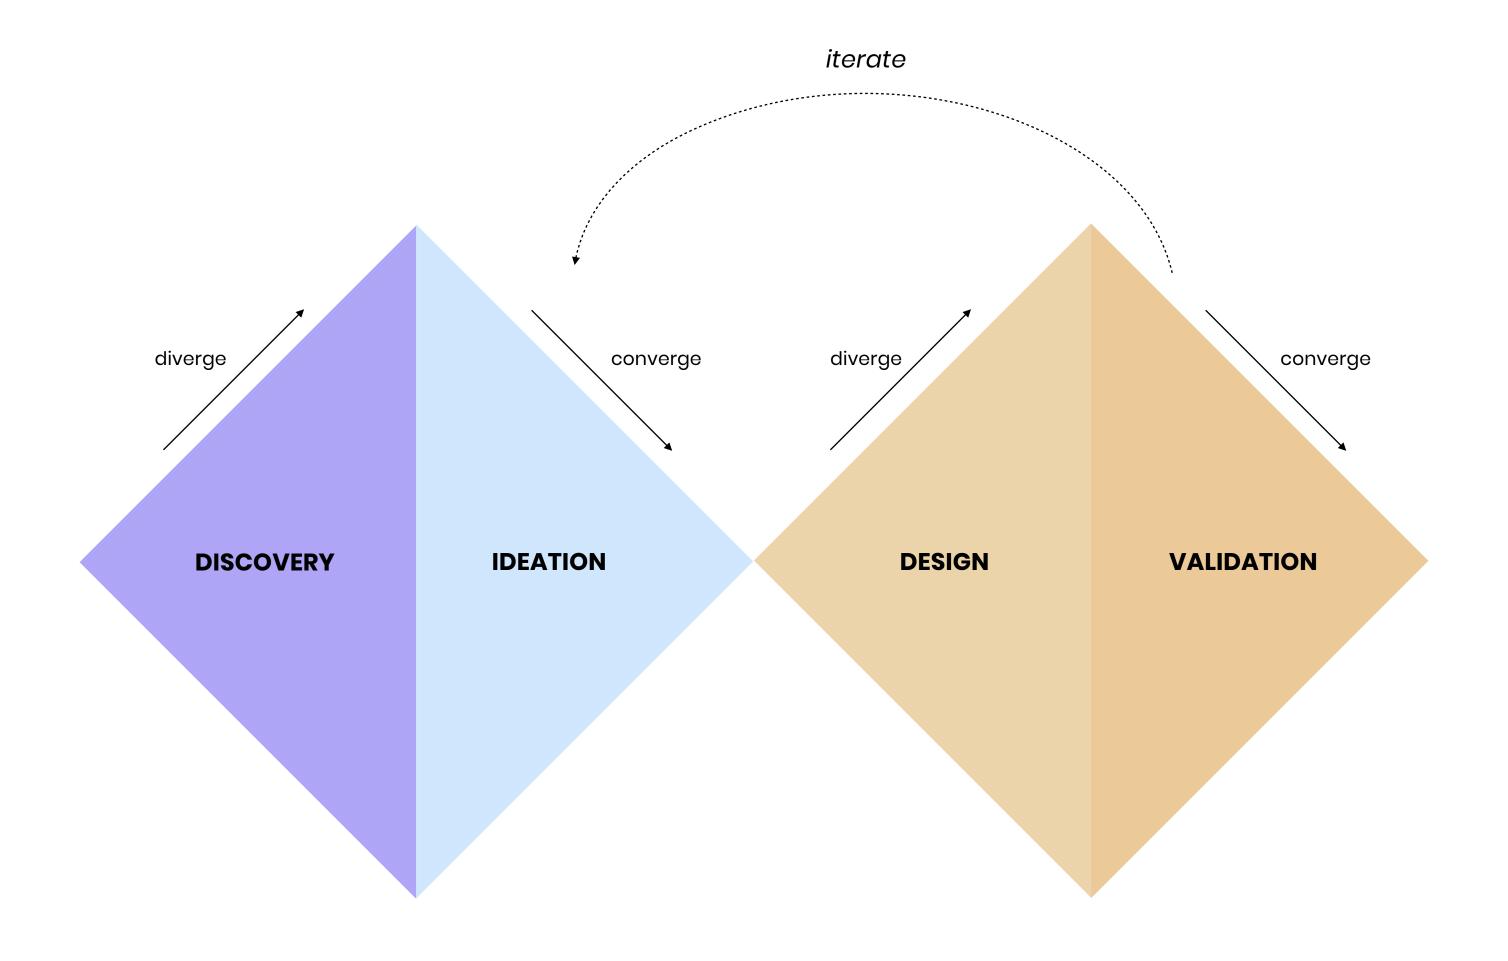

**Users:** Lawyers, notaries, paralegals, and land surveyors in

BC

**Cohort:** Business Analyst, Scrum Master, Project Manager, Engineering, and the UI Design team.

My role: User Experience Designer Leader

### Design Process

# Discovery

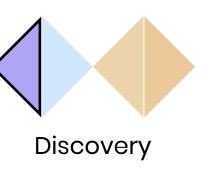

Understand the business problem Understand user's needs, pain points and workflows Define the benchmark and measurement of success

# Understanding the Challenge

#### The current process

- Involves multiple steps of filling out PDF forms offline and submitting them online
- PDF forms lack sufficient help and instructions, leading to errors and confusion in the application process
- PDF forms have limited validation
- The portal is not accessible and user-friendly
- The submission portal is not mobile responsive and requires access to a desktop computer at all time

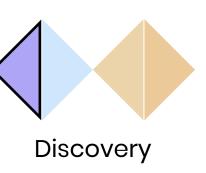

### User Research

#### Pain-Gain mapping

- Conducted customer consultations to understand pain points and challenges in the current LTSA form process
- Prepared consultation plans and met with lawyers, notaries, and paralegals
- Captured user input for user journey maps and personas.

TARGET GROUP Who are the primary/secondary use	ers? What is the problem that this product will solve? What is the motivation behind what the user wants/nee	de stand out and are critical for its success.	USINESS C is the product goi

> Better focus in forecost and lice of resource

Decrose Service Call Volume

### Ethnographic Studies

- Conducted interviews with legal professionals to learn about their experiences and perspectives
- Observed them as they completed their daily tasks
- Analyzed legal artifacts such as notes and documents used in a typical day

### LAWYER CHARLES

#### • Work on mobile

Costs down

GOALS

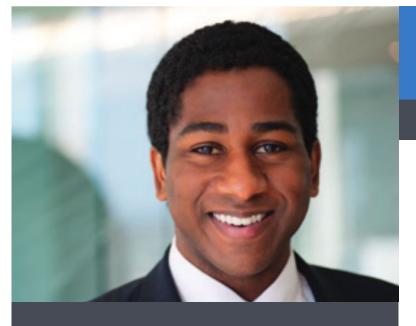

• Happy clients

Avoiding defects

• Streamlining processes

#### TASKS

- Meet with clients
- Research legal issues
- Negotiate contracts
- Solve problems
- Review titles
- Draft original agreements/contracts
- Review documents prior to execution
- Direct the front-line filer
- Witness and execute documents
- Sign documents with Juricert
- Review LTO "package" before submission
- Liaise with LTO
- Document clarification
- Occasionally the entire filing process from file opening to post-completion
- **PREFERRED DEVICES**
- PC: Tablet: Phone:

"Even if I can delegate tasks, sometimes I still like to do them myself."

Occupation:	Lawyer
Workplace:	Small law firm
Location:	Langley
Education:	Law degree

#### User Scenario

Receives a phone call in the middle of a vacation from his paralegal about there being no available lawyer to sign the juricert. As his signature is uploaded to a cloud, he is able to sign the form on his mobile phone.

#### DESCRIPTION

Belongs to a small firm in the Fraser Valley that mostly handles residential conveyances. Used to be a sole practitioner, but now has a few employees in his firm. Very hands-on.

#### WHAT I DO IN A DAY

- Instruct/provide direction to staff
- Title/tax searches
- Digitally sign documents
- Meet with and/or sign up clients
- Answer questions from conveyancers
- Negotiate nature of instruments
- Review of LTO searches, plans, charges
- Report to clients
- Review financing package
- Organize undertakings

#### WEBSITES/SOFTWARE USED

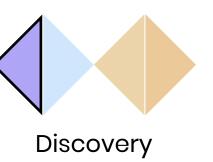

- E-Conveyance
- Brief Convey
- Adobe Acrobat
- iMapBC
- Remote desktop software (Teamviewer, Citrix, etc.)

### Personds

- Created personas to build empathy with users and identify their needs
- Focused on expert legal professionals and users new to the field
- Referred to different user groups to validate

the personas

### Journey Map

- Created a journey map to identify users' flows, frustrations, questions, and needs
- Facilitated various workshops to gather user input on different workflows involved in the land title industry
- Uncovered insights and opportunities to enhance the user experience

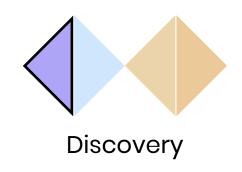

### Validating Assumptions

#### Assumption

Lawyers and paralegals use the Web Filing the same way.

#### Validated Assumption

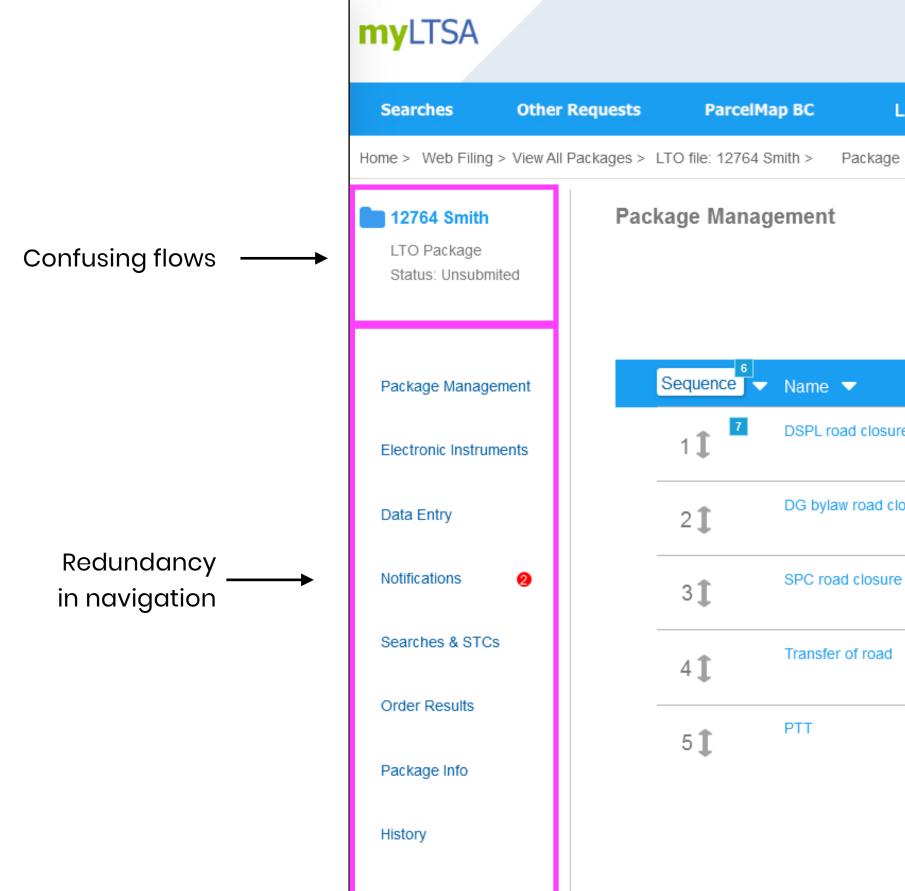

- Lawyers need to review and electronically sign each completed form in a
- short amount of time, while relying on paralegals to review and edit the
  - documents and ensure that all details are entered correctly.

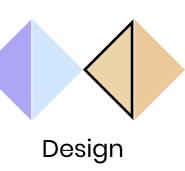

Define the user flows and information architecture Create design specifications and guidelines

### UIDesign

- Collaborated with UI team to enhance LTSA UI accessibility and usability
- Advocated for AA compliance changes
- Developed Web Filing keyboard behavior accessibility guidelines
- Promoted evolution of LTSA style guide into a design system with clear rules, principles, and reusable patterns

#### **Resulted in**

- Increased use of reusable UI components
- Improved development efficiency and speed

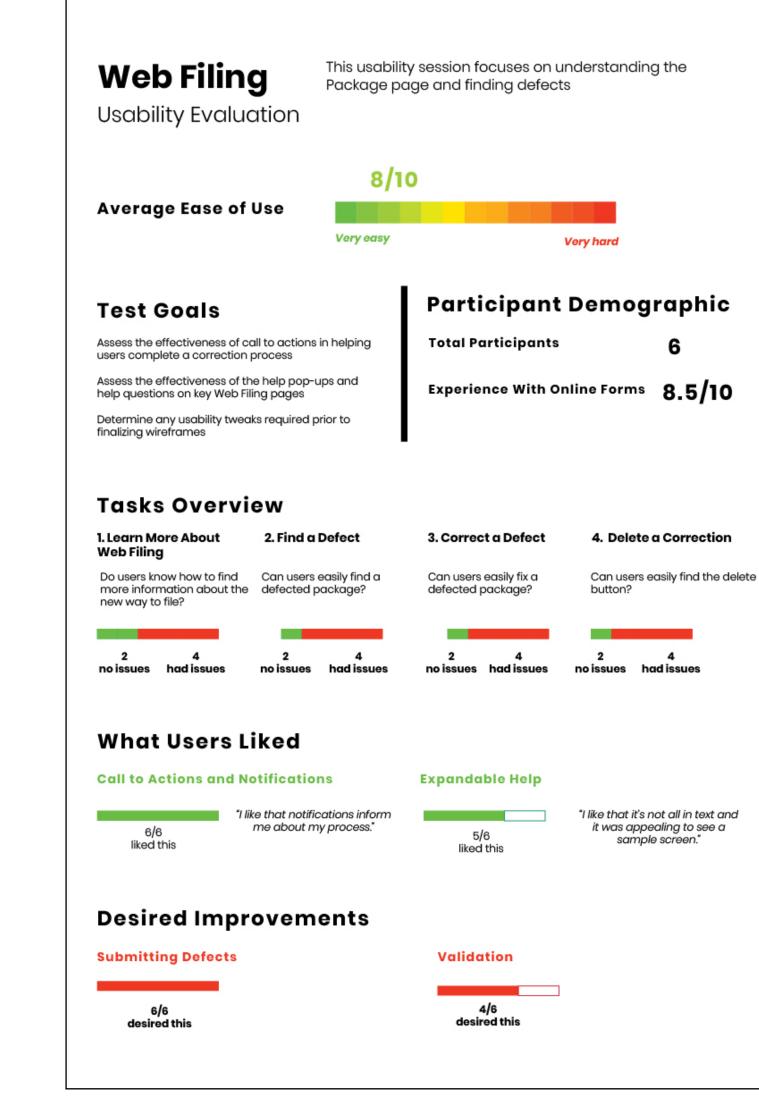

Validate designs with users Track KPIs

## Validation

### Usability Evaluation

- Led usability studies to identify usability issues and understand users' mental models
- Ensured language and content were meaningful and clear to users
- Developed test plans, task scripts, and recruited participants
- Created reports and presented findings with design improvement proposals

Validation

### Outcome

- My designs improved the user flow and navigation of the new filing system
  - Reduced user errors by 50%
  - Created flexibility and efficiency of use
    - Increase efficiency in development
  - Created the foundations of an accessible design system for the LTSA
